Receiver Drier Service Tips

The Receiver Drier stores excess refrigerants, filters out contaminants from the HVAC system, and removes moisture to protect the system from internal corrosion.

Service Tips on Receiver Driers

Placement	Placement should be on the high-pressure side and warm to touch during operation.
Visually Inspect for Leaks	Visually inspect fittings; note any oil seepage. This may indicate a leak.
Receiver Drier Replacement	Upon opening the system always replace the receiver Drier with a new, original OEM part.
Fittings	Never leave the fittings uncovered prior to installation.
HVAC System Servicing	The receiver Drier should be the last component replaced during service of the HVAC system.
