

THE TEAM YOU CAN RELY ON.

# FOR TOUGH MISSIONS, COUNT ON BERGSTROM ECU'S.

In military vehicles, reliability is everything. So it's no surprise that for over 40 years, Bergstrom has been supplying ECU's (environmental control units) to some of the leading OEM's that build vehicles for the U.S. military.

They know they can count on the reliability and quality of our systems. And so can you.

## An elite team.

Bergstrom combines robust engineering and design, enhanced reliability, low maintenance and interchangeability to deliver high performance climate control systems for almost any military application.

With Bergstrom on your team, you'll get ECU's that not only meet and exceed your quality and performance standards, but that stand up to the intense, unforgiving conditions of military duty.

We can supply your military applications with heating and cooling systems engineered for any operation system—belt driven, battery, hydraulic, APU or hybrid APU/battery.

When you need a tested and proven team to get the job done, call on Bergstrom. We're ready.

## TESTED AND PROVEN.

With Bergstrom, you'll never have to worry about our ECU's meeting yours – or the military's – performance criteria and specifications. We have a team of over 80 highly experienced HVAC engineers who not only design for optimum system performance, but then put it to the test in some of the most advanced testing facilities available.

Bergstrom engineers have access to a full-scale environmental chamber, where ECU's can be tested under real-world conditions in the equipment in which they are installed. Units are tested for thermal exposure (-94F to +384F), high dust environments, vibration, destructive torque, chemical resistance and many other factors.

The results? ECU's you can rely on to perform as expected and as specified.

### Keeping soldiers cool (and warm) under fire.

Bergstrom ECU's have proven their mettle in some of the toughest environments in the world, including several years active service in humvees, medium-duty trucks, combat towers and ambulances deployed in both Iraq and Afghanistan.

### Progressive Engineering

Our engineering staff utilizes some of the most progressive engineering tools available, including Computational Fluid Dynamics, Pro-Mechanical Behavior Modeling, and Unigraphics.

### Interchangeability

Bergstrom ECU's for the military are designed with a high level of interchangeability. Because of our years of experience designing and manufacturing HVAC systems, we engineer our systems with a high degree of interchangeability to make service and parts replacement simpler and more efficient.

### Global Footprint

Bergstrom has manufacturing, R&D, engineering and support facilities around the globe to better serve you. Our commitment to global sourcing means you can count on us to be there when – and where – you need us.

# NO ONE RANKS HIGHER IN QUALITY CONTROL.

Bergstrom has earned a reputation for exceptional quality. In fact, we've been recognized by such prestigious firms as Caterpillar and Navistar as outstanding quality suppliers. One of the reasons we consistently achieve such high quality standards are the quality assurance programs we've implemented and strictly adhere to.

## ISO 9001

Bergstrom meets all the qualifications and requirements, and is fully certified to ISO 9001 standards.

## Six Sigma

We use this proven process for ongoing quality improvement.

## Mastery Program

This process encourages team members to increase their proficiencies in quality, productivity, safety, teamwork, continuous improvement and value.

### Proud of our service.

As a privately-held, American owned company, Bergstrom is proud to provide comfort to our troops who are working hard to defend our freedom.

KEEPING THINGS ROLLING ALL OVER THE WORLD.

Bergstrom is a global leader in the design and supply of climate systems to the commercial and military vehicle industry. Since 1949, many of the world's largest and most admired commercial vehicle manufacturers have trusted Bergstrom for their heating and air-conditioning system needs.
